The Scaling Fault Line

Why growth is outpacing systems

7 STORES LIVE	80+ STORE TARGET	1,200 SKU/STORE	7 CHAIN STAGES	20:15 MIN CHECKOUT	2 SILOED SYSTEMS

Disconnected Backbone

P0

Manufacturing and retail run on separate platforms — no real-time link from factory to shelf.

2 disconnected systems | 0% real-time sync

SCALE RISK 90%

Latency compounds across 7 stores today, 80 tomorrow.

SOLVED BY → Integration Spine · Exec Cockpit

Inventory Without Truth

P0

~1,200 SKUs/store move through 7 unlinked stages — procurement to certification to replenishment.

14% dead stock | 2.3× turns/yr

SCALE RISK 85%

Dead stock ties up capital as SKU cells scale 8,400→96,000.

SOLVED BY → Traceability & Inventory

Checkout Is the Bottleneck

P1

Billing takes 15–20 minutes per customer, with no clienteling or omnichannel support.

20:15 min avg. billing | 0 clienteling context

SCALE RISK 65%

~22 bills/day/store → ~5.5 staff-hours/day lost.

SOLVED BY → Checkout · CX Demo

Leadership Is Flying Blind

P1

No unified dashboard for sales, inventory, store performance or customer behaviour.

0 exec dashboards | manual reporting only

SCALE RISK 60%

Store decisions lag transactions by days, not seconds.

SOLVED BY → MIS · Executive Cockpit

SKU & Stone Health — Current State (7 Live Stores)

One root cause, sequenced fix. Siloed systems block scale. **P0** = infrastructure that connects first; **P1** = experience & visibility layers that compound once P0 is live.

Platform Strategy — Modernize, Integrate or Replace

KEEP Factory ERP - API bridge, not rip-and-replace.

BUY Store POS & Hardware - commodity, identical @ 80 stores.

BUILD Twin · Spine · Cockpit · App - the differentiated core IP.

PHASED IMPLEMENTATION

From 7 to 80 in Three Disciplined Phases

A sequenced, risk-managed rollout plan

7 stores → 20 stores → 50 stores → 80 stores

0 Stabilize

7 → 20 stores · Months 1–4

NETWORK COVERAGE 25%

PRIORITIES

- Digital Stone Twin + trace ledger live
- Integration Spine MVP (mfg ↔ retail)
- Checkout pilot at 3 flagship stores
- Store-manager training & change playbook

DEPENDENCIES

- Factory ERP API bridge ships first
- Store-manager buy-in secured pre-pilot

RISK & MITIGATION

- Change resistance — manager champions
- API delays — legacy POS runs in parallel

TARGET METRICS

Checkout ≤ 8 min | 100% pilot trace

SHIPS (PROTOTYPE)

Stone Twin · Spine MVP

SUCCESS OWNER

Product + Engineering

1 Connect

20 → 50 stores · Months 5–9

NETWORK COVERAGE 62%

PRIORITIES

- Spine live at every onboarded store
- AI replenishment engine turned on
- Buyback scaled · consumer app live
- Store onboarding QA automated

DEPENDENCIES

- Spine uptime ≥ 99% from Phase 0
- Replenishment model trained on pilot data

RISK & MITIGATION

- New-store data drift — onboarding QA
- Overrides ignored — weekly model review

TARGET METRICS

Dead stock 14%→10% | Turns 2.3→2.9

SHIPS (PROTOTYPE)

AI Replenishment · App

SUCCESS OWNER

+ Store Operations

2 Optimize

50 → 80 stores · Months 10–15

NETWORK COVERAGE 100%

PRIORITIES

- Predictive demand & dynamic pricing
- Executive MIS live company-wide
- DPDP audit · concierge shared
- Cross-store concierge capacity pooled

DEPENDENCIES

- Auto-replenishment accuracy ≥ 85%
- MIS latency < 60s sustained @ 50 stores

RISK & MITIGATION

- Scale latency/cost — auto-scale + cache
- Pricing-AI trust gap — sign-off > 5% moves

TARGET METRICS

Checkout 4:42 · NPS 71 | ₹480 Cr run-rate

SHIPS (PROTOTYPE)

NPS 71 BREAKDOWN

Promoters 52% · Passives 46% · Detractors 2%

8,400 → 96,000	20% → 85%	10,240 → 1,17,040
SKU-STORE CELLS	AUTO-REPLENISHMENT RATE	LIVE STONES (STONE TWIN)

Assumption: store MTD productivity matures ₹0.42→₹0.50 Cr as network scales; validated on the 7-store pilot (Jan–Oct 2026), re-based quarterly. Scale Command model: linear in store count between the 7-store pilot and the 80-store plan.

Executive Cockpit

Real-time leadership view

- Live sales, inventory & store-health dashboard
- Exception feed auto-flags stock, cert & CX risk
- AI decision log — 142 decisions, 86% auto-approved
- Store leaderboard — top-5 by MTD revenue, ranked live
- Avg. order value ₹68K (▲9%) · cross-sell 22%
- MIS refresh latency target < 60 seconds

Responsible by Design

The Conquest layer

- 100% stone traceability, SGL-certified custody
- Life-time buyback recycles 4.1 kg gold YTD
- DPDP-ready consent-first data — opt-in only
- ~25% price accessibility vs. mined-diamond market
- BIS-hallmarked gold · ethical-sourcing dossier
- Buyback priced at 87% of certified resale value
